Version	2.0	Version Date	05/10/2023	

1. INTRODUCTION

This Pollution Incident Response Management Plan has been developed to meet the requirements of the Protection of the Environment Legislation Amendment Act 2011 (POELA Act). On 29 February 2012 the POELA Act introduced changes to the Protection of the Environment and Operations Act 1997 (POEO Act) to improve the way that pollution incidents are reported, managed and communicated to the general community. The Port Kembla Coal Terminal (PKCT) holds Environmental Protection Licence (EPL) No. 1625 under the Protection of the Environment and Operations Act 1997 (POEO Act) and therefore must meet the requirements under the Act.

PKCT also needs to operate their site in accordance with Major Project Approval 08_0009, whereby Schedule 4 requires that the Department of Planning and Environment (DP&E) shall also be notified within 24 hours of any incident which has caused (or may cause) material harm to the environment.

This Plan provides a reference for the procedures and responsibilities for pollution incident response within the PKCT premises, as well as the day to day management measures for the prevention and mitigation of an incident.

COMPANY	Port Kembla Coal Terminal Limited
EPL NUMBER	1625
POSTAL ADDRESS	PO Box, 823, Wollongong East, NSW 2520
SCHEDULED ACTIVITIES	Coal Work
FACILITY NAME AND ADDRESS	Port Kembla Coal Terminal Limited Port Kembla Road Wollongong NSW 2520

Table 1: Facility Details

2. OVERVIEW OF OPERATIONS

PKCT operates as a coal terminal providing receipt, storage and ship loading services to a range of customers whom predominantly constitute mining companies in the NSW Southern and Western Coal Fields.

PKCT is located within a heavy industrial and port precinct on the northern side of the port of Port Kembla inner harbour and currently operates on land leased from NSW Ports. A head lease relating to over the water structures i.e. 102 is held with Roads and Maritime Services.

3. PLAN OBJECTIVES

The objectives of this Plan are to:

- Outline the responsibilities and contact details of responsible persons during an emergency event.
- Guide appropriate responses to a specific pollution incident.
- Outline the communications and notification protocol for emergency events.
- Provide a Plan for the locations of site entrances/egresses and locations of hazardous materials.
- Identify the risks of hazardous materials kept on site.
- Identify the management measures to control or minimise potential harm from hazardous materials.

This document is UNCONTROLLED once printed				
Doc ID	MP.013	Owner	Health, Safety, Environment & Risk Lead	Page 2 of 30
Version	2.0	Version Date	05/10/2023	

- Identify neighbours to the site and provide their contact details.
- Outline the personnel training and auditing regimes for the emergency responses outlined within the plan.

4. DEFINITION OF A POLLUTION INCIDENT

The definition of a pollution incident is;

“an incident or set of circumstances during or as a consequence of which there is or is likely to be a leak, spill or other escape or deposit of a substance, as a result of which pollution has occurred, is occurring or is likely to occur. It includes an incident or set of circumstances in which a substance has been placed or disposed of on premises, but it does not include an incident or set of circumstances involving only the emission of any noise.”

Notifications of a pollution incident are required if there is a risk of “material harm to the environment”, which is defined in section 147 of the POEO Act as:

- a) harm to the environment is material if:
 - a. it involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial, or
 - b. it results in actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding \$10,000 (or such other amount as is prescribed by the regulations), and
- b) loss includes the reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment.

Possible material pollution events that have been identified at PKCT premises include:

- Oil Spill in the Harbour
- Major Fire
- Road and Rail Transport Related Spill.
- Coal Storage and Dust Management
- Water Pollution Event

These potential material events and others have been assessed by PKCT and included within the Environmental Aspects and Impacts Register RG.001. Each hazard has been assessed for likelihood on a scale of 1 to 10 with 10 being very likely. Controls have been enacted to reduce the likelihood and consequence of these hazards. The 5 major hazards are discussed below.

5. DESCRIPTION AND LIKELIHOOD OF HAZARDS

This section outlines the main pollution hazards to human health or the environment associated with the activities being undertaken at the PKCT premises, including details of any circumstances or events that could, or would, increase that likelihood.

Plans showing PKCT likely pollution hazards and locations, as well as stormwater drains are presented as **Figure 1** and **Figure 2**. A description of each of the main likely hazards follows.

Version	2.0	Version Date	05/10/2023	

5.1 Oil Spill in the Harbour

Possible causes may be from the discharge of a ship, an oil/fuel mishap on or near the wharf, a ship bunkering pipeline mishap, an underground fuel tank rupture or fuel tank mishap when filling, or contaminated ballast discharge.

The likelihood of an Oil Spill in the Harbour occurring is 3 (Unlikely). This likelihood may be increased if controls are not followed, such as unlicensed tanker drivers using the dock or lack of maintenance. Administrative controls are in place to ensure minimisation of this occurrence. It is acknowledged that this type of incident would require reporting to all authorities.

An oil bunkering pipeline and mobile tankers are used to supply ships with fuel at Berth 102. This activity is managed by Australian Marine Fuels (Manildra Park Pty Ltd), who are responsible for their operations. Australian Marine Fuels have an agreement with NSW Ports to operate the bunkering services and PKCT's EPL 1625 references this external responsibility for the pipeline and bunkering services provided by Australian Marine Fuels (Manildra Park Pty Ltd). PKCT has a duty to monitor, control access and respond if a bunkering related pollution incident was to occur on their site.

Should a fuel spill event occur then the main risks are injury to persons from ingestion or contact with spilled material. Offsite environmental impacts from fuel and hydrocarbon spills would depend on the scale of spill and the location of the incident and may result in contamination of waterways which can potentially be toxic to marine ecosystems.

5.2 Major Fire

The PKCT Fire Management Plan MP.019 outlines the processes for managing its fire protection equipment and the required actions in case of a fire. The Management Plan aims to ensure that there is appropriate firefighting equipment onsite in suitable locations.

The following activities have the potential to cause a fire hazard:

- Electrical equipment, wiring and cabling
- Operational conveyors, rollers
- Stackers, reclaimers and ship loaders
- Friction in general associated with moving components
- Hot work including welding, oxy cutting and grindings
- Flammable and combustible materials including coal and fuel
- Refuelling operations using mobile tankers and fixed bowsers
- Mobile plant operations/vehicle movements
- Coal stockpiles/internal combustion
- Coal build up under belts

The likelihood of a Major Fire occurring is 1 "Unlikely". The likelihood may be increased by poor housekeeping, maintenance or a poor fire fighting system. Controls are in place to mitigate in case of fire.

Due to the nature of the site, with moving equipment and the extent of coal across the site, the whole site would be considered a fire risk location.

This document is UNCONTROLLED once printed				
Doc ID	MP.013	Owner	Health, Safety, Environment & Risk Lead	Page 6 of 30
Version	2.0	Version Date	05/10/2023	

Should a significant fire event occur then the main risks are injury to persons from burns and/or smoke inhalation. Offsite impacts from smoke would be unlikely and would depend on the scale of fire event and prevailing weather conditions.

Refer to section “General Emergency Response” and section “Major Fire” within this document for additional details relating to a major fire emergency.

5.3 Road or Rail Transport Related Spill or Leak

Incidents involving vehicles transporting coal, hydrocarbons or other materials to site could occur on either the road or rail. **The likelihood of a significant Fuel Spill or Leak occurring is 3 (Unlikely)**. Potential locations on and near site are shown in **Figure 1**, however this can occur anywhere between the off-site material pickup location and PKCT site.

PKCT has a duty to monitor, control access and respond if a road & Rail transport related pollution incident was to occur on their site.

PKCT does not have any fuel storage areas on site. Underground tanks previously in use have been decommissioned. Diesel is brought to site as required by a third party and vehicles are filled via a mobile refueller.

Should a fuel spill event occur then the main risks are injury to persons from ingestion or contact with spilled material or a vehicle fire event. Offsite environmental impacts from fuel and hydrocarbon spills would depend on the scale of spill and the location of the incident. This may have the potential to result in contamination of waterways which can potentially be toxic to marine ecosystems.

It is anticipated that the emergency combat agency (i.e. fire brigade) will be called and they would take control of the situation during a significant event.

5.4 Coal Storage and Dust Management

Dust related incidents associated with stockpiling of coal could occur during the stacking and reclaiming process as well as due to weather events causing lift-off from in situ stockpiles.

The following activities have the potential to cause a dust event:

- Severe wind event
- Existing dust controls unable to cope with the event
- Operations preparation is inadequate for a wind event
- Equipment failure

The PKCT Dust Management Plan MP.014 outlines the controls in place and mitigating actions to prevent dust events occurring and how to respond to an event if one was to occur.

The likelihood of a significant Dust Event creating air quality issues for PKCT Personnel and our community is 3 (unlikely).

5.5 Water Pollution Event

Water pollution events could occur as a result of operations at PKCT. The most likely scenarios for water pollution from PKCT are those associated with discharge of dirty water from a berth or pond. The likely causes of a dirty water discharge are failure of a dosing system, clay contaminated coal or discharge from a berth due to failure of a containment system or process.

This document is UNCONTROLLED once printed				
Doc ID	MP.013	Owner	Health, Safety, Environment & Risk Lead	Page 7 of 30
Version	2.0	Version Date	05/10/2023	

The likelihood of a significant water pollution event creating water quality issues for PKCT Personnel and our community is 1 (unlikely).

6. INVENTORY OF POLLUTANTS

PKCT maintains a register for hazardous materials and pollutants. The information requirements for the hazardous materials register are detailed in the Hazardous Materials Management Procedure PR.012. A copy of the Safety Data Sheets (SDS) for each hazardous material is maintained within a Hazardous Materials Register, ChemAlert.

Details of pollutant storage locations and methods for storage are provided in the Hazardous Materials Management Procedure PR.012. and are broadly illustrated within **Figure 1** and **Figure 2**. A list of the hazardous substances with large maximum storage quantities at PKCT are listed below.

HAZARDOUS SUBSTANCE	MAXIMUM STORAGE QUANTITY
Coal	850,000 tonnes
Coreshell 71303	3,000 litres
Ultrion 8187	5,000 litres
Inergen	8,350 litres

Table 2: PKCT Hazardous Substances with Large Storage Quantities

7. PRE-EMPTIVE ACTIONS TO BE UNDERTAKEN AND MINIMISING RISK TO PERSONS ON PREMISES

PKCT have a number of pre-emptive actions that are undertaken to minimise or prevent any risk of harm to human health or the environment arising from the activities undertaken at the premises. This includes a Risk Based facility design, the strategic provision of spill kits and fire protection equipment.

PKCT aims to minimise or prevent risk of harm to human health or the environment from hazardous material as outlined in the Hazardous Material Management Plan PR.012. The plan includes provisions for the safe storage of hazardous materials, a stringent review process for the design of these facilities and up to date plans and figures are available to site personnel where required.

The Fire Management Plan MP.019 outlines the process for managing PKCT's fire protection equipment.

PKCT uses and Aspects and Impacts Register RG.HS.2 to identify and risk rank each environmental risk associated with the PKCT operation.

A Health, Safety, Environment and Community (HSEC) Management System has been established for all controlled activities and controlled sites. HSEC hazards and associated risks must be managed in accordance with Risk Management Procedure PR.002.

A current copy of the National Code of Practice compliant SDS for each hazardous material is to be maintained in ChemAlert.

A health surveillance system is in place to monitor the long and short term exposure to hazardous materials on-site and will be conducted in accordance with the Work Health Safety Regulation 2011.

Transportation of hazardous material that is also classed as dangerous goods will be undertaken in accordance with the requirements outlined in the Hazardous Material Management Plan PR.012.

This document is UNCONTROLLED once printed				
Doc ID	MP.013	Owner	Health, Safety, Environment & Risk Lead	Page 8 of 30
Version	2.0	Version Date	05/10/2023	

PKCT also provide emergency response equipment and facilities, including spill kits, eyewash stations, safety showers, emergency alarms and pumps. This equipment is available at various locations across the site and in close proximity to high pollution risk areas. A summary of the various safety equipment on site and their location is provided below;

SAFETY EQUIPMENT	LOCATION AT PKCT
Spill Kits and Booms	Spill Kits are located on Berth 102, within and outside the Store, In and outside of the East and West Workshop, at Road Receival. Spares and booms can be found in the PPE room attached to the Main Store.
PPE	PPE supply is located in the Main Store
Stockyard Sprays	Stockyard sprays are used to control and manage dust events at PKCT. These are controlled electronically by the Control Tower Operators.
Fire Extinguishers	Fire Extinguishers and alarms are located within each building at PKCT. Spare extinguishers are located in the main Store. Inergen systems are installed in the Substations and yard machines and will deploy automatically in case of a fire. Fire Hoses are located on yard machines and buildings across site
Factory Talk Monitoring and Alarming System	All networked computers on site, 24/7 monitoring within Control Tower
Continuous Dust Monitors	Located at the PKCT South Truckwash and Wollongong Sewerage Treatment Plant. Access to data via PKCT Factory Talk.
Water dosing system	Systems located at the Settlement Lagoon, Central Pond (plumbers shed) and Northern Pond to assist with clarification of water on site.

Table 3: List of Major Safety Equipment and Locations at PKCT

8. WHEN TO REPORT AN INCIDENT

Licensees are required to report “material” pollution incidents immediately instead of “as soon as practical” (section 148 POEO Act). Licensees must notify each relevant authority about any incidents deemed to be “material”, not just the appropriate regulatory authority (ARA) under the POEO Act.

An incident will be deemed to be significant, requiring external notification and reporting if it results in or involves:

- **Material Harm** – harm to the environment is material if it involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial, or
- **Actual or potential loss or property damage** of an amount, or amounts in aggregate, exceeding \$10,000.
- **Hazardous Substances** – Any substance present in the workplace, which is on the List of Designated Hazardous Substances [NOHSC: 10005] or may be classified as such using the Approved Criteria for Classifying Hazardous Substances [NOHSC: 10008].

Important Note: Hazardous substances are harmful to health, and include substances that may cause chronic illnesses such as cancer, asthma, dermatitis and other diseases. Hazardous substances have health effects that are not always obvious – symptoms may develop only years after repeated and prolonged exposure.

9. EMERGENCY RESPONSE PROCEDURE AND REPORTING AN INCIDENT

This section provides information on the emergency response actions that must be undertaken immediately after a pollution incident to reduce or control any pollution.

A Trigger Action response Plan (TARP) has been developed for each likely “Material” pollution event. The TARP tables are to be utilised by Management and operational staff as a guide to assist in responding to an Environmental emergency and providing information to personnel about who needs to be contacted in the case of a “Material” Pollution Event. The TARP tables are located at the end of this PIRMP as **Appendix A**.

In the event that an Environmental Event occurs that does not have a specific TARP developed, or the event is not deemed material, then refer to following documents for guidance;

- Emergency Management Plan MP.001
- Incident Reporting and Investigation Procedure PR.011
- Emergency Response Procedure PR.001

If an environmental event occurs, PKCT personnel shall follow the process outlined in **Figure 3** below.

It is important to note that once an event has been assessed as “material”, all relevant authorities must be notified immediately as outlined in **Table 4**.

The Incident Reporting and Investigation Procedure PR.011 provides guidelines for incident management, ensuring reporting, notification, investigation, corrective preventive action, follow-up and closure at the PKCT site. This procedure covers incidents associated with activities at PKCT or where employees are undertaking offsite activities for PKCT.

10. CONTACT DETAILS AND RESPONSIBILITIES

Once an event has been assessed as “material”, all relevant authorities must be notified immediately as outlined in **Table 4**.

In order to maintain consistency during the reporting process, external notification to the required agencies is to be made by a Manager, Superintendent or the PKCT Environmental Specialist only.

REGULATORY AUTHORITY	CONTACT DETAILS
Response Priority 1. If the incident is “Material” and presents an immediate threat to human health or property:	
Fire and Rescue NSW	000
Response Priority 2. If the incident is assessed as “Material” and does not require an initial combat agency, or once the 000 call and the emergency response has been activated, all relevant authorities must be notified by a manager, superintendent or Environmental Specialist as follows:	
EPA (Wollongong Office) EPA Pollution Incident Line	Ph: 02 4224 4100 131 555
Department of Planning, Industry and Environment (Compliance, Wollongong Office)	02 4247 1852 or compliance@planning.nsw.gov.au (24 hours), and report via the Portal below; https://majorprojects.planningportal.nsw.gov.au/prweb/IAC/app/MP_/nFOIhaSdMtGYtjTH1uzqzw*/!STANDARD
The Ministry of Health via the local Public Health Unit	02 4221 6700 After Hours: Wollongong Hospital Ph: 02 4222 5000 (Ask for Public Health Officer on call)
Safework NSW	Ph: 13 10 50
Fire and Rescue NSW	000; 1300 729 579 NB: if the event warrants calling “000”, there is no need to contact Fire and Rescue again
Wollongong City Council	02 4227 7111 After Hours Emergencies: 1300 557 980
Port Authority of NSW – (Harbour Master, Sharad Bhasin) - or Vessel Traffic Control	Harbour Master: 0409 811 810 After Hours Emergencies: VTC 42 750197

Process and Reliability Superintendent: David Zancolich	1800 111 448 (Community Enquiries 24/7)

Table 6: PKCT Incident Management Team Contact Details

11. COMMUNICATING WITH NEIGHBOURS AND THE LOCAL COMMUNITY

Communicating with neighbours and the local community is an important element in managing the response to any incident. PKCT employs a Community Engagement Plan which provides a framework and details the approach taken to engage the local community.

The PKCT Community Engagement Plan provides strategies which will provide the community with the information to understand what they may expect during a pollution incident or emergency, the sections below outline the mechanisms used to notify the community and neighbours of the PKCT site of a material pollution incident.

The following mechanisms will be used for providing early warning to the owners and occupiers of premises who may be affected by an incident occurring on the premises.

- Telephone calls to neighbouring sites and operations (as per contacts detailed in **Table 7**)
- Incident notification and updates on the PKCT website (www.pkct.com.au)
- Email and telephone notification of CCC contacts (as detailed within the Community Engagement Plan);
- Media notification (as required).

The location and proximity of PKCT neighbours are provided below in **Figure 4**.

NEIGHBOURING STAKEHOLDER	CONTACT NAME	CONTACT DTAILS
BlueScope Steel (Port Kembla)	Environment Officer on-call (Varies)	02 4275 7522 (24 Hours – Ask to be put through to Environment Officer on-call)

Doc ID	MP.013	Owner	Health, Safety, Environment & Risk Lead	Page 15 of 30
Version	2.0	Version Date	05/10/2023	

12. STAFF TRAINING

Details of the staff training program for emergency response at PKCT are provided in the Emergency Management Plan MP.001. PKCT also have a number of incident specific emergency response plans such as the Fire Management Plan MP.019 and Hazardous Material Management Plan PR.012. These plans provide staff training programs which outline the nature and objectives of the program as well as the frequency of the training to be undertaken and how records for any training are to be maintained.

Where appropriate, sub-contractors, visitors and external stakeholders may be trained in and understand the emergency response plans, their roles and responsibilities, and the use of emergency response resources.

Training records are maintained in PKCT's Tech 1 system and electronic copies and training frequency information is stored in the following location;

I:\HSEC\Safety Training Day

13. PLAN ADMINISTRATION

In accordance with Part 3A clause 98D(2) & 98D(3) of the Protection of the Environment Operations (General) Amendment (Pollution Incident Response Management Plans) Regulation 2012, a publically available version of this Pollution Incident Response Management Plan (see **Appendix B**) will be made available on the PKCT website www.pkct.com.au.

If the plan is unavailable at the PKCT website and a person has made a written request the Public version of the Pollution Incident Response Management Plan (see **Appendix B**) will be provided without charge.

A copy of this entire plan will also be maintained at the PKCT premises at the Main Control Room and will be made readily available to those responsible for its implementation as well as any authorised officer upon request.

14. TESTING AND MANAGEMENT PLAN REVIEW

The Pollution Incident Response Management Plan and supporting plans and procedures will be tested routinely at least once every 12 months. Testing will ensure that the information included in the plan will be accurate and up to date and that the plan will be capable of being implemented in a workable and effective manner.

Plans will be tested within one month of a "material" pollution incident occurring in the course of an activity, to which a licence relates, that requires activation of PKCT's Emergency Management Team. This follow up test will be to assess, in light of that specific incident, whether the information included in the plan is accurate and up to date, and the plan is still capable of being implemented in a workable and effective manner.

An annual review of the PIRMP document will be undertaken. Tracking of this review is managed through PKCT's "TICKIT" legal compliance system.

15. REFERENCE DOCUMENTS AND RELATIONSHIP WITH OTHER EMERGENCY PLANS

According to section 153D Clause 98B(2) of the POELA Act, licensed premises that already have a plan (or equivalent plan), are not necessarily required to prepare a new or separate plan under the legislative changes. A plan may form part of another existing emergency or incident response plan as long as the information in the plans are in accordance with section 153C of the POEO Act and the POEO(G) Regulation.

This document is UNCONTROLLED once printed				
Doc ID	MP.013	Owner	Health, Safety, Environment & Risk Lead	Page 16 of 30
Version	2.0	Version Date	05/10/2023	

PKCT have a number of existing Management Plans and documents that are relevant to this Pollution Incident Response Management Plan. It is recommended that these documents are consulted in conjunction with this Plan, particularly where they have been referenced as such.

The following documents are relevant to this Pollution Incident Management Plan:

APPENDIX B - TRIGGER ACTION RESPONSE PLANS - DUST

EVENT TYPE	TRIGGER	ACTION / RESPONSE	RESPONSIBLE
Minor Event DER Level 1 and 2	First Dust Alert email received by Tower	<ul style="list-style-type: none"> Check site for visible dust, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. Run spray cycle if required and direct water cart to problem areas. Log actions and information in Tower logs. 	Control Tower
	Short duration (<5mins) visible dust generation from a stockpile, Transfer station/conveyor etc.	<ul style="list-style-type: none"> Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. Run spray cycle if required and direct water cart to problem areas. Ensure belt misting sprays are operational. Run cycle. Log actions and information in Tower logs. 	Observer and Control Tower
	Intermittent visible dust lift-off from vehicle operation (driving, excavating pushing up etc.) Equivalent to DER Level 1 and 2.	<ul style="list-style-type: none"> Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. Run spray cycle if required and direct water cart to problem areas. Stop work if required to manage dust levels Log actions and information in Tower logs. 	Vehicle Operator, Observer and Control Tower
Moderate Event DER Level 3 and 4	Second and additional Dust Alert emails received by Tower	<ul style="list-style-type: none"> Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. Run spray cycle if required and direct water cart to problem areas. Stop work to manage dust levels. Dust levels must be controlled prior to re-starting work. EMS event to be entered. Log actions and information in Tower logs. 	Control Tower and Supervisor

	Moderate duration (>5mins) visible dust generation from a stockpile, transfer station/conveyor	<ul style="list-style-type: none"> Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. Run spray cycle if required and direct water cart to problem areas. Ensure belt misting sprays are operational. Run cycle. Stop work to manage dust levels. Dust levels must be controlled prior to re-starting work. Log actions and information in Tower logs. 	Observer and Control Tower
	Constant visible dust lift-off from vehicle operation (driving, excavating pushing up etc.) Equivalent to DER Level 3 and 4.	<ul style="list-style-type: none"> Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. Run spray cycle if required and direct water cart to problem areas. Stop work to manage dust levels. Dust levels must be controlled prior to re-starting work. EMS event to be entered. Log actions and information in Tower logs. 	Vehicle operator, Observer and Control Tower
Major Event DER Level 5 and 6	Dust Alerts system records an exceedance of dust criterion.	<ul style="list-style-type: none"> Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. Run spray cycle/s to wet area and direct water cart to problem area/s. Stop work/operation to manage dust levels. Dust levels must be controlled prior to re-starting work. Log actions and information in Tower logs. Include other visible dust sources/fog etc. in commentary. EMS Event to be entered. Superintendent/Environmental Specialist to be contacted. Environmental Specialist and Superintendent to assess whether EPA/DPIE reporting is required. 	Control Tower, Environmental Specialist and Superintendent
	Visible dust lift-off from stockyard or other area that	<ul style="list-style-type: none"> Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. 	Observer,

	leaves PKCT boundary or could be visible by person off site.	<ul style="list-style-type: none"> • Run spray cycle/s to wet area and direct water cart to problem area/s. • Ensure belt misting sprays are operational. Run cycle. • Stop work/operation to manage dust levels. Dust levels must be controlled prior to re-starting work. • Log actions and information in Tower logs. • EMS Event to be entered. Superintendent/Environmental Specialist to be contacted. • Environmental Specialist and Superintendent to assess whether EPA/DPE reporting is required. 	Control Tower, Environmental Specialist and Superintendent
	Visible dust lift-off from vehicle operation (driving, excavating pushing up etc.) leaves PKCT boundary or could be visible by person off site. Equivalent to DER Level 5 and 6.	<ul style="list-style-type: none"> • Contact Control Tower, confirm spray guns are set to appropriate cycle and operational, check for gun isolations. • Run spray cycle/s to wet area and direct water cart to problem area/s. • Stop work/operation to manage dust levels. Dust levels must be controlled prior to re-starting work. • Log actions and information in Tower logs. • EMS Event to be entered. Major Event	<p>Potential or actual fire which can't be controlled e.g.</p> <ul style="list-style-type: none"> • Coal on belt/ risk of fire in ship hatch • Coal under belt during ship loading • Flammable/ combustible materials, electrical • Coal in stockyard/ internal combustion. 	<ul style="list-style-type: none"> • Ensure personal safety and safety of others; • Contact Main Control Room and provide details of the event. MCR to consider activation of emergency response/ siren. • If safe to do so, contain/ fight the fire. Ensure you have an escape path and retreat if necessary. • Utilise stockpile sprays and water cart if needed • Take over management of emergency response through Field Response Team and support emergency service or expert external service providers as needed. • Activate IMT if needed. • If called, meet and support Fire and Rescue NSW- assist in identifying site hazards e.g. stored energy- electrical, conveyor belts, uncontrolled movements if belts burn through ensure safe access to the location of fire, identify location of any combustible and flammable materials. • Arrange for MCR and Manager/Environmental Specialist/ Superintendent notification. • If needed, secure site, cease operations • Environmental Specialist/Superintendent/Manager to consider whether notification to relevant agencies should be undertaken/ Activation of PIRMP 	<p>Event Observer, Team Supervisor, Main Control Tower</p> <p>Superintendent/Environmental Specialist</p>
--------------------	---	--	---

APPENDIX D - TRIGGER ACTION RESPONSE PLANS – OIL SPILL

EVENT TYPE	TRIGGER	ACTION / RESPONSE	RESPONSIBLE
Minor Event	<p>Minor spill, easily contained, small quantity, clean up straightforward, spill not a health hazard, severity not likely to escalate e.g.</p> <ul style="list-style-type: none"> leak from mobile plant or vehicle truck hydraulic hose failure leak from storage container 	<p>Ensure personal safety and safety of others;</p> <ul style="list-style-type: none"> Stop discharge if possible, contain the spill. Contact team supervisor. Arrange clean up. Get support if needed. Ensure spill residues are disposed of in drums in front of wash-down bay Arrange for EMS entry. 	Event Observer, Team Supervisor,
Moderate Event	<p>Moderate spill, material quantity, difficult containment, may or may not have health implications, severity may escalate. e.g.</p> <ul style="list-style-type: none"> Leak from storage container Ship bunkering mishap Oil escaping from ship 	<p>Ensure personal safety and safety of others;</p> <ul style="list-style-type: none"> Stop discharge if possible, contain the spill. Support emergency response as needed. Contact Main Control Room and team supervisor and provide details of the event. Contact NSW Ports Signal Station for assistance if a harbour spill. Utilise booms and bunds in store and spill kits as necessary Contact Environmental Specialist/Manager/Superintendent Environmental Specialist/Manager/Superintendent to notify relevant agencies if deemed necessary 	<p>Event Observer, Team Supervisor, Main Control Tower</p> <p>Manager/Environmental Specialist</p>
Major Event	<p>Major spill on premises or escaping into harbour waters, emergency services or external e.g.</p> <ul style="list-style-type: none"> Ship bunkering failure Oil escaping from ship 	<p>Ensure personal safety and safety of others;</p> <ul style="list-style-type: none"> Stop discharge if possible, contain the spill. Support emergency response as needed. Contact Main Control Room and team supervisor and provide details of the event. 	<p>Event Observer, Team Supervisor, Main Control Tower</p> <p>Superintendent/Environmental Specialist</p>

	<ul style="list-style-type: none"> Transformer rupture or explosion 	<ul style="list-style-type: none"> Contact NSW Ports Signal Station for assistance if a harbour spill. Utilise booms and bunds in store and spill kits as necessary Contact Environmental Specialist/Manager/Superintendent Environmental Specialist/Manager/Superintendent to notify relevant agencies if deemed necessary Take over management of emergency response through Field Response Team and support emergency service or expert external service providers as needed. Activate IMT if needed. If called, meet and support Fire and Rescue NSW- If needed, secure site, cease operations Environmental Specialist/Superintendent/Manager to consider whether notification to relevant agencies should be undertaken/ Activation of PIRMP 	
--	--	---	--

APPENDIX E - TRIGGER ACTION RESPONSE PLANS – WATER POLLUTION

EVENT TYPE	TRIGGER	ACTION / RESPONSE	RESPONSIBLE
Scenario 1 Discharge from Berth	<p>Small volume of contaminated water discharges to harbour from PKCT facility operation eg.</p> <ul style="list-style-type: none"> leak from mobile plant or vehicle truck hydraulic hose failure leak from storage container Discharge from Berth or machine Settlement Lagoon discharge, short duration 	<ul style="list-style-type: none"> Contact MCR to initiate emergency response. Contact Environmental Specialist or Risk Manager for assistance, may require IMT activation if significant. Look for source of spill and isolate. Use available PKCT spill response kits to mitigate and contain further spill entering harbour. Contact Port Kembla Port Corporation Signal Station to provide assistance with booms etc. Licensed waste providers such as Veolia may be able to assist with removal of contaminant Environmental Specialist or Risk Manager to assess and contact EPA/DP&E if required 	<p>Event Observer, Team Supervisor, Main Control Tower</p> <p>Manager/Environmental Specialist</p>
Scenario 2 Discharge from Settlement Lagoon	<ul style="list-style-type: none"> Settlement Lagoon Water is visibly dirty at the western overflow point, poor quality water is discharging to harbour. 	<ul style="list-style-type: none"> Contact Environmental Specialist or Risk Manager for assistance. Contact Team Coordinator. If able, stop any pumps transferring to the Lagoon. Cease any washdowns etc. causing water ingress. Check that dosing system is operational, contact Nalco if needed. Depending on source of water, utilise coagulant dosing system or use dewatering pipeline in Lagoon to transfer water back to North Pond or recirculate water and re-dose at Lagoon inlet chamber. Environmental Specialist or Risk Manager to assess and contact EPA/DP&E if required. 	<p>Event Observer, Team Supervisor, Main Control Tower</p> <p>Manager/Environmental Specialist</p>

		<ul style="list-style-type: none"> Licenced waste providers such as Veolia may be able to assist with removal of contaminant Initiate IMT if pollution event is significant and 	
Scenario 3 Dirty Water Plume in Harbour from Ship Deballasting	<ul style="list-style-type: none"> Deballasting ship creates a visible dirty plume in harbour Ship activities cause contaminated water to enter harbour 	<ul style="list-style-type: none"> Contact MCR to initiate emergency response. Contact Port Kembla Port Corporation Signal Station to provide assistance with booms etc. Contact SBS and ask to speak to ship personnel to stop ship deballasting. Environmental Specialist or Risk Manager to assess and contact EPA/DP&E if required 	Event Observer, Team Supervisor, Main Control Tower Manager/Environmental Specialist

APPENDIX F – PUBLIC POLLUTION INCIDENT RESPONSE MANAGEMENT PLAN TO BE MADE AVAILABLE ON PKCT WEBSITE

PUBLIC POLLUTION INCIDENT RESPONSE MANAGEMENT PLAN

This Pollution Incident Response Management Plan for the Port Kembla Coal Terminal (PKCT) Environmental Protection Licence (EPL) 1625, has been developed and made publicly available in accordance with the *Protection of the Environment Operations (General) Amendment (Pollution Incident Response Management Plans) Regulation 2012* and the *Protection of the Environment Operations Act 2011* (POEO Act)

All public enquiries and reporting should be directed to PKCT's 24 hour community hotline on **1800 111 448**.

If an emergency or incident is determined to have caused or threatened "material" harm to the environment PKCT will immediately contact each relevant authority below. EPL holders are required to report "material" pollution incidents immediately instead of "as soon as practicable" (section 148 POEO Act). Licensees must notify all relevant authorities about any incidents deemed to be "material".

Emergency Pollution Response Procedure & Contact Details:

Priority 1 - If the incident is "Material" and presents an immediate threat to human health or property:

Fire and Rescue: 000

Priority 2 - If the incident is assessed as "Material" and does not require an initial combat agency, or once the 000 call and emergency response has been satisfactorily activated, notify all relevant authorities as follows:

(1) EPA Wollongong: 02 4224 4110 or 131 555 (24 Hour)	(2) Department of Planning and Environment 02 6391 3100
(3) SafeWork NSW: 131 050	(4) Ministry of Health: 02 4221 6700 or 02 4222 5000 (Ask for Public Health Officer)
(5) Fire and Rescue NSW 000; 1300 729 579 NB if the event warrants calling "000", there is no need to contact Fire and Rescue again	(6) NSW Ports: Port Operations Manager – 0417 217 274 / BSMS Security (after hours) 4225 7935
(7) Wollongong City Council: 02 4227 7111 or 1300 557 980	

This document is UNCONTROLLED once printed				
Doc ID	MP.013	Owner	Health, Safety, Environment & Risk Lead	Page 28 of 30
Version	2.0	Version Date	05/10/2023	

A pollution incident is an incident or set of circumstances during or as a consequence of which there is or is likely to be a leak, spill or other escape or deposit of a substance, as a result of which pollution has occurred, is occurring or is likely to occur. It includes an incident or set of circumstances in which a substance has been placed or disposed of on premises, but it does not include an incident or set of circumstances involving only the emission of any noise. An incident will be deemed to be significant, requiring external notification and reporting if it results in or involves:

- Material harm – harm to the environment is material if it involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial, or
- Actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding \$10,000.
- Hazardous substances – any substance present in the workplace, which is on the list of designated hazardous substances [NOHSC: 10005] or may be classified as such using the approved criteria for classifying hazardous substances [NOHSC: 10008].

All pollution incidents or potential near misses will be recorded and captured within PKCT's internal event management system. This process involves investigations by relevant managers to determine materiality and appropriate follow up responses.

Community Notification Requirements:

As the premises outlined in EPL 1625 has a number of neighbours (industrial operations and community), PKCT has developed and implemented an emergency response plan specific for the emergency and potential impacts on neighbouring properties and the broader community.

The implemented plan details how PKCT will allocate appropriate responsible people to notify and co-ordinate with affected community members.

The following mechanisms appropriate to the circumstances have been adopted to notify and update surrounding community in the event of a significant incident:

- Incident notification and updates on the PKCT website;
- Local media source notifications & media releases (where appropriate);
- Telephone calls to neighbouring sites or doorknocking of residents (where appropriate).

Actions taken by PKCT Emergency Management Teams (IMTs) to respond to and combat a pollution emergency will be guided by internal emergency response management plans and procedures specific to the incident or emergency context and these plans are tested and reviewed on a regular basis.

A map showing proximity to neighbours is presented below.
